

You need to allow XM radio to broadcast local weather, etc. on their weather channels. I travel frequently and I need this weather and trafffic information for reasons of personal safety. I am not aware of which channels carry local weather and traffic information on AM & FM and I don't want to be scanning the dial while driving. This is an issue of safety in my mind. I want the weather and traffic when I need it and where I can find it easily!

Thank you.
